

# Server Administration

The **Server Administration** topics address global EDG setup, configuration, and maintenance from *within* the EDG application. For installation and setup of the EDG application server, see [Server Installation and Integration](#).

## Setup

- [Server Configuration Parameters](#)
- [EDG Configuration Parameters](#)
- [Cached Graphs](#)
- [Product Registration](#)
- [Reconfigure Deployment Descriptor](#)

## Access Control

- [Provide Secure Storage Password](#)
- [Rights Management](#)
- [EDG Permissions Management](#)
- [Password Management](#)

## Deployment and Export

- [Base URI Management](#)
- [Upload Project](#)
- [Delete Project](#)
- [Send Projects to Another Server](#)
- [Create TriG file of all EDG production graphs](#)
- [Refresh Workspace](#)

## System Monitoring

- [Server Information](#)
- [OSGi Bundle Information](#)
- [Memory Management](#)
- [TBL Log](#)

## Component Monitoring

- [Process Management](#)
- [Auto-Complete Management](#)
- [Search the EDG Index](#)
- [Text Indices](#)
- [Scheduled Jobs](#)
- [Current Ontology Optimization Caches](#)
- [Count Triples](#)
- [Log of SPARQL Function Calls](#)

## Development and QA

- [Available Web Services](#)
- [Query TopBraid Platform API using GraphQL](#)
- [Create Snapshot of EDG \(e.g., for testing\)](#)
- [Restore Snapshot of EDG](#)
- [Run all DASH Test Cases \(from \\*.test.\\* files\)](#)
